

Model UT208
Supplied in individual
protective shipping box

Typical Applications:

Irrigation systems
(both standard AC and
battery-powered)

Landscape lighting

Seasonal and holiday lighting

The Ultimate Multi-Meter for Irrigation and Landscape Lighting

Here's a full-featured multi-meter that's perfect for troubleshooting irrigation systems and landscape lighting. This rugged unit is equipped to handle all of the common tests professionals need to make to diagnose and solve electrical problems.

- AC and DC voltage testing: Checks both standard and battery-powered irrigation controllers including transformers, batteries and more. Easily check voltage at each fixture in a lighting installation.
- Resistance (ohms) testing: test circuits and solenoids for electrical continuity. Includes built-in continuity buzzer.
- AC and DC current testing (amps): clamp meter checks current flow

Special Features:

- Auto-ranging
- Large digital readout with large icons, backlit display
- Data hold mode
- Sleep mode saves batteries
- Low battery indicator

Standard Accessories:

- Uses standard 9V battery (included)
- Supplied with test leads and English user manual.
- Includes heavy-duty carrying case.
